

Sept. 1, 2017

Dear Representative:

We are writing to urge Congress to allocate at least \$300 million above the funding level for the Census Bureau in the FY 2018 Commerce, Justice, and Science Appropriations bill (H.R. 3267), which will be incorporated into an omnibus spending measure. This funding level is necessary not only to ensure a sufficient funding ramp up two years ahead of the 2020 Census, but also to enable the Bureau to sustain other key economic and demographic programs and surveys. Simply put, more funding is required to ensure a fair and accurate 2020 Census in all communities and to avoid large cost increases for the decennial census in the final years of the decade. This funding is also necessary to preserve the quality of other vital data sets the agency produces to inform evidence-based policy making in the public and private sectors.

As members and supporters of The Census Project ([www.thecensusproject.org](http://www.thecensusproject.org)), a diverse network of census stakeholders, including business, civil rights, state and local government, education, housing, health, labor, and human services interests, we are writing to communicate our strong support for funding the Census Bureau when the House of Representatives considers the Make America Secure and Prosperous Appropriations Act, the proposed fiscal year (FY) 2018 omnibus spending bill, in September. In addition, if and when Congress considers a FY 2018 continuing resolution, we ask Congress to provide a full funding anomaly for the Census Bureau that exceeds the President's budget request and the current House Appropriations Committee mark on an annualized basis.

H.R. 3267 allocates \$1.507 billion for the Census Bureau, roughly \$37 million more than the agency's FY 2017 spending level and \$10 million above the Administration's FY 2018 request. Nevertheless, the amount is **woefully inadequate and unrealistic given the significant resources the Census Bureau needs to put Census 2020 preparations back on track and to ensure an accurate, inclusive, and cost-effective decennial census.** The proposed funding ramp-up is also significantly smaller than what both Republican and Democratic Administrations have approved between years seven and eight for past decennial censuses. (<https://thecensusproject.org/2017/05/25/trump-census-budget-too-little-too-late/>).

The current House FY 2018 recommendation is insufficient and, if enacted, will not allow the Census Bureau to move forward with a robust advertising campaign and Partnership Program. These activities are essential to ensuring an accurate count of historically hard-to-enumerate populations, including low-income households, people of color, immigrants, and young children. Particularly at risk are rural and remote communities, because funding constraints have forced the Bureau to cancel all field tests in rural areas. For example, the Bureau has canceled two of three test sites for the 2018 End-to-End Census Test—the only integrated test-run of new technologies and operations in a census-like environment. Canceling the 'dress rehearsal' in Pierce County, WA, and several West Virginia counties limits the evaluation of complex new counting methods and IT systems. That is a recipe for an undercount and cost increases.

[www.TheCensusProject.org](http://www.TheCensusProject.org)

The proposed funding level also jeopardizes other key surveys and programs that the Census Bureau conducts, such as the 2017 Economic Census, Survey of Income and Program Participation, and American Community Survey.

Further, if and when Congress considers a FY 2018 Continuing Resolution, we support granting the Census Bureau a funding anomaly that provides the agency with funding above the President's request, on an annualized basis, to restore comprehensive, rigorous 2020 Census preparations and to meet its obligation to conduct the next decennial census as required by the U.S. Constitution.

Thank you for considering our views regarding this important matter.

Sincerely,
